**SHEETS, TUBES, RODS,
WIRE, RIVETS, NAILS,
ETC., ETC.**

**IN STOCK
READY TO SHIP**

9TH EDITION

**U. T. HUNGERFORD
BRASS & COPPER CO.**

ORDERS AND INQUIRIES

GENERAL INFORMATION DESIRED

In meeting the varied requirements of metal consuming trades, so many different alloys, tempers and anneals must necessarily be used that it is not practicable to outline in a catalog the kind or quality best suited to any particular purpose.

Therefore, in addition to information regarding **thickness, width, length and temper**, which should invariably appear on each order or inquiry; the purpose for which material is to be used should also be clearly stated and when possible, sample should be submitted.

TOLERANCES

Metal furnished by us is rolled or drawn as close to indicated dimensions as is commercially practicable. All tolerances conform to those of the *American Society for Testing Materials*.

STANDARDS OF MEASUREMENT

On Brass, Bronze, Copper (note exception below) and Nickel Silver Sheets, Wire, Rod and Brazed Tube, Brown & Sharps or American Gauge is the standard of measurement to which our "Star Brand" products are manufactured.

The thickness of Copper Sheets is ordinarily designated by weight in ounces or pounds to the square foot. Conversion tables for working out thicknesses of any type of material according to standards other than above, will be found in the back section of this book.

Long custom has made **Stubs** or Birmingham Gauge the standard on **Seamless Brass, Bronze and Copper Tubes** and unless otherwise specified, gauge numbers as applied to the wall thickness of Seamless Tubes will be interpreted according to that standard.

MEASURING DIAMETER OF TUBES

When ordering either **Seamless or Brazed Tubes** it should be clearly stated whether the diameter given is "**inside**" or "**outside**."

ANNEALS AND TEMPERS

The character of either the **Anneal** or the **Temper** desired should always be specified.

The tempers ordinarily furnished for **Sheet Brass** are "**half hard**," "**hard**" and "**spring**."

Wire, Rods, Seamless and Brazed Tubes are usually furnished "**commercially hard**" unless otherwise ordered, **except for the following**.

Our "**Star Brand**" **I. P. S. Seamless Brass Plumbing Pipe** is ordinarily furnished just sufficiently **annealed** to prevent cracking and make it suitable for plumbing and steamfitting work.

Seamless Pipe and Tube that is to be **bent, coiled or flanged** should be **so specified on the order**.

"**Star Brand**" **I. P. S. Seamless Copper Pipe** can be furnished from stock or mill in either "**commercially hard**" or "**soft**" temper.

STANDARD LENGTHS

Lengths of standard stock items are clearly designated on the following pages of this catalog.

CUTTING TO EXACT LENGTHS

Material ordered cut to **uniform specific lengths** will be subject to an **extra charge**; except that when the length specified is 2 feet or over, **no charge** will be made for cutting provided, either of the following phrases is added, viz.:

"With end pieces included"

"With random lengths included"

An additional charge will be made for sheet metal cut to lengths of less than 2 feet; except when the following phrase is added, viz.:

"Or cut to any multiple thereof"

FACILITIES FOR CUTTING STOCK MATERIAL

We have unexcelled facilities for cutting, sawing or slitting stock material to any required size which enables us to furnish **special** sizes almost as promptly as standard stock items.

Large Spools (1 lb. gross):
B. & S. Ga. Nos. 16, 19, 20, 21, 22, 24 and 26.

HARD HIGH BRASS WIRE

In Coils, cut to any required weight:
B. & S. Ga. Nos. 4, 5, 6, 7, 8, 9, 10, 11, 12,
13, 14, 15, 16.

SOFT LOW BRASS BRUSH WIRE

In Coils, cut to any required weight:
B. & S. Ga. Nos. 21, 22, 23, 24, 25, 26, 27
and 28.

SPRING BRASS WIRE IN COILS

In Coils of 10 to 12 lbs.:
B. & S. Ga. Nos. 2, 3, 4, 5, 6 and 7.
In Coils of 5 to 7 lbs.:
B. & S. Ga. Nos. 8, 9, 10, 11, 12, 13, 14, 15, 16, 17,
18, 19, 20, 21, 22, 23, 24.
In Coils of 40 to 50 lbs.:
B. & S. Ga. Nos. 2, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13,
14, 15 and 16.

ON SPOOLS

Small Spools ($\frac{1}{4}$ lb. gross):
B. & S. Ga., Nos. 16, 19 and 20.
Medium Size Spools ($\frac{1}{2}$ lb. gross):
B. & S. Ga., Nos. 16, 19 and 20.
Large Spools (1 lb. gross):
B. & S. Ga., Nos. 16, 19 and 20.

ROUND EDGE FLAT BRASS WIRE

In Coils of 40 to 50 lbs.
 $\frac{1}{4}$ " wide by No. 14 B. & S. Ga. (.064")

SOFT COPPER WIRE IN COILS

In Coils of about 25 lbs.
 $\frac{3}{8}$ ", $\frac{5}{16}$ " and B. & S. Ga. Nos. 2, 3, 4, 5,
6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17,
18, 19, 20, 21, 22, 23 and 24.

ON SPOOLS

Small Spools ($\frac{1}{4}$ lb. gross):
B. & S. Ga. Nos. 16, 19, 21, 22, 24, 25, 26 and 27.
Medium Size Spools ($\frac{1}{2}$ lb. gross):
B. & S. Ga. Nos. 16, 19, 21, 22, 24, 25, 26 and 27.
Large Spools (1 lb. gross):
B. & S. Ga. Nos. 16, 19, 21, 22, 24, 25, 26 and 27.

COPPER RADIO WIRE IN COILS AND ON REELS

7-Strand, Plain, Copper Wire:
Nos. 22 and 24 B. & S. Gauge on reels of
about 100 lbs.
22 B. & S. Ga., also in coils of 100, 150
and 200 ft. packed in individual cartons
as illustrated above:
7-Strand, Tinned, Copper Wire:
No. 22 B. & S. Gauge.
In Coils of 100, 150 and 200 ft. packed in
individual cartons as illustrated above:
Also on reels of about 100 lbs.
Single-Strand, Plain, Copper Wire:
No. 14 B. & S. Gauge.
In Coils of 100, 150 and 200 ft., packed in
individual cartons as illustrated above:
Also in coils of about 25 lbs.
7-Strand, Enameled Copper Wire:
.024" in Coils of 100, 150 and 200 ft., packed in
individual cartons, as illustrated above; also
on reels of about 100 lbs.

SPRING TEMPER PHOSPHOR BRONZE WIRE

In Coils of 5 to 7 lbs. only:
B. & S. Ga. Nos. 6, 7, 8, 9, 10, 11, 12, 13, 14,
15, 16, 17, 18, 20, 21, 22, 24, 25 and 27.
In Coils of about 60 lbs.:
B. & S. Ga. Nos. 6, 7, 8, 9, 10, 11, 12, 13, 14, 15,
and 16.

PHOSPHOR BRONZE TILLER ROPE

On Reels or in Coils of any required length:
 $\frac{3}{16}$ ", $\frac{1}{4}$ ", $\frac{5}{16}$ " and $\frac{3}{8}$ " diameter.

BRASS AND COPPER WIRE

Table of Approximate Weights
In Pounds per 1000 Linear Feet

B. & S. Gauge Numbers	Brass Pounds	Copper Pounds
1	241.4	253.3
2	191.4	200.9
3	151.8	159.3
4	120.4	126.4

PHOSPHOR BRONZE BEARING BUSHINGS
CORED AND SOLID CAST IN THE ROUGH

[illegible]

Our TOBIN BRONZE ROD is the genuine product of the original inventors and patentees. It is a composition of Copper, Tin and Zinc in such proportions, and manipulated in such manner during the various processes of manufacture as to insure uniform texture, exceedingly high tensile strength and extreme resistance to corrosion.

BRONZE WELDING ROD

Ready For Immediate Shipment From Our Warehouse Stock.

$\frac{1}{8}$, $\frac{3}{16}$ and $\frac{1}{4}$ Inch Diameter. 3 Ft. Exact Lengths.

A free flowing, tough, "all purpose" Bronze filler rod with an unusually low melting point. Every length flattened on one end and embossed with our name as illustrated above.

GENUINE TOBIN BRONZE WELDING ROD

$\frac{1}{8}$, $\frac{3}{16}$ and $\frac{1}{4}$ Inch Diameter. 3 Ft. Exact Lengths.

HUNGERFORD STAR BRAND BRASS WELDING ROD

$\frac{1}{8}$, $\frac{3}{16}$ and $\frac{1}{4}$ Inch Diameter. 3 Ft. Exact Lengths.

WEIGHTS, TENSILE STRENGTH AND MELTING POINTS

Diameter	Approximate Weight in Lbs. per Foot			Approximate Melting Point		Approximate Tensile Strength Lbs. per Sq. Inch
	$\frac{1}{8}$ "	$\frac{3}{16}$ "	$\frac{1}{4}$ "	Centigrade	Fahrenheit	
Hungerford Bronze	0.04421	0.1012	0.1773	900°	1652°	63000
Tobin Bronze	0.04471	0.1006	0.1788	885°	1625°	54000
Phosphor Bronze	0.04726	0.1063	0.189	1050°	1922°	45000
Hungerford Brass	0.04413	0.1013	0.177	910°	1670°	47800

The melting point of Hungerford Bronze filler rod (1652° F.) is lower than most ordinary iron and steel alloys, which precludes excessive heating and possible burning of the base metal. Hungerford Bronze is easy to machine and where desired will take a high finish.

Packed in cases of about 250 lbs. net. Smaller quantities furnished in burlapped bundles if so specified.

NOTE.—Weights are in pounds, diameters and thicknesses in inches, areas in square inches. The safe working pressure is calculated on thickness of walls at bottom of thread and indicates pounds per square inch internal pressure. These weights are theoretically correct, but variations must be expected in practice.

COPPER RANGE BOILERS

Ready For Immediate Shipment From Our Warehouse Stock

HUNGERFORD B-90 IMPROVED COPPER RANGE BOILERS

30, 40, 50, 60, 80, 100 Gallons Capacity; 200 and 250 Lbs. Test Pressure.

DIMENSIONS

30-Gal. 12" x 61 1/2"
40 " 14" x 62"

50-Gal. 16" x 61"
60 " 17" x 62"

80-Gal. 20" x 62"
100 " 20" x 78"

Test and safe working pressures are clearly die stamped on each Hungerford B-90 Improved Copper Range Boiler, before it leaves the factory.

The street pressure in most localities, rarely exceeds 60 lbs.; more often it is not over 30 to 40 lbs. Therefore, a 200 lb. test provides for a wide margin of safety. Where the street pressure exceeds 85 lbs., a 250 or 300 lb. test boiler should be used.

The customary rule is that the street pressure must not be greater than 42 1/2% of the test pressure stamped on the boiler and we recommend that this rule be strictly adhered to.

Our B-90 Improved Copper Range Boilers embody several new and distinctly advantageous features of construction.

The weakest point in a Copper Range Boiler is usually the bottom seam. The sharp bend in the metal required to form the joint for a floated bottom boiler, strains and weakens the Copper; the ultimate result is usually a leak.

Hungerford B-90 Improved Copper Range Boilers have *dome bottoms* and heads which *telescope* over the shell. The shell is not turned up; neither is the top edge of the *dome bottom* turned over; consequently, there is no strain whatever on any part of the boiler proper.

The *dome bottom* is joined to the shell by means of a spun Copper *reinforcing band*, the top edge of which is just slightly turned over to meet the shell and then firmly riveted in place. The rivets pass through three thicknesses of Copper; the *dome bottom*, shell and reinforcing band.

The reinforcing band also serves as a "rest" or base for the iron stand and eliminates any possibility of galvanic action or wear through friction between the boiler and its supporting stand.

Sturdy Brass Reinforcing Rings are fixed at frequent intervals inside of the shell.

Hungerford B-90
Copper Range Boiler

BRASS BOILER COUPLINGS

30, 40, 50 and 60-Gallon Boilers carried in our New York stock, have 3/4 I. P. S. Male Thread Couplings, two bent and two straight. Can also furnish 1/2 I. P. S. Female or 3/4 Fine Thread Female when specifically requested.

30, 40, 50 and 60-Gallon Boilers carried in our Boston stock have 1/2 I. P. S. Female Thread Couplings, two bent and two straight. Can also furnish 3/4 I. P. S. Male or 3/4 Fine Thread Female when specifically requested.

80 and 100-Gallon Boilers in both New York and Boston stock, have 3/4 I. P. S. Female Thread Couplings, two bent and two straight. Can also furnish 1 I. P. S. Male Thread when specifically requested.

"HI-LO" AND "THERMOSTAT" TAPPINGS

Can be furnished to special order with or without side couplings, on any size boiler.

IRON BOILER STANDS

Carried in stock ready to ship for regulation 30 and 40 gallon, Hungerford B-90 Copper Range Boilers. (Can also furnish on two or three days' notice, stands for 50, 60, 80 and 100-gallon, vertical type Boilers).

Special Copper Storage Tank

CISTERN PRESSURE COPPER RANGE BOILERS AND HOT WATER STORAGE TANKS

Furnished promptly to special order in any required pressure and capacity.

Storage Tanks with either hand hole or man hole, with or without steam coil and with special tapings, according to conditions under which the tank is to be installed. A detailed sketch, showing exact requirements, will facilitate handling of orders or inquiries.

ACID METAL FITTINGS FOR USE WITH SEAMLESS COPPER PIPE

Made to order very promptly in any style and size required, from a special acid-resisting alloy guaranteed to contain absolutely no zinc whatever, or other metal having any greater tendency to dissolve or disintegrate from contact with acids or pickling solutions than pure copper itself. Our Acid Metal Fittings have been in use for years and with very marked success in Steel Mills, Pulp and Paper Mills, in Coal Mines where sulphur charged water has to be handled, and in many other industries where steam or water lines come in contact directly or indirectly with acid fumes or acid baths as well as for conveying acid solutions, etc.

COPPER ROOFING ACCESSORIES

Ready For Immediate Shipment From Our Warehouse Stock

MONARCH SHANK, PLATE AND CIRCLE GUTTER HANGERS FOR HALF ROUND, SINGLE BEAD, GUTTERS

COPPER; 4"; 5"; 6"; Diameter.
GALVANIZED; 4"; 5"; 6"; " "

"Monarch" Shank, Plate and Circle Gutter Hangers are made in both **pure copper** and galvanized iron.

Pure Copper Fittings should always be used for hanging Copper Gutters. Iron or steel when allowed to come in contact with Copper, set up a **galvanic** action which causes rapid deterioration and results in very unsatisfactory service.

Our "Monarch" Shank, Plate and Circle Gutter Hanger is built on entirely new principles that overcome the limitations and disadvantages of old fashioned **numbered** Shank and Circle Gutter Hangers.

"Monarch" Shanks are adjustable; only **one** type of Shank is required for any pitch of roof.

"Monarch" Plates, for use on fascia boards and overhanging rafters, are **reversible** which permits either right or left fastening; Plates are adjustable up or down, same as the Shanks.

A secure fastening can be made by using the "Monarch" Circle alone, nailing direct to rafter or fascia board. No other type of Circle can be used alone in this manner.

BRASS & COPPER CO.

STAR ★ BRAND

PERFORATED SHEET BRASS AND COPPER

We have tools for the patterns listed below (which includes those illustrated on opposite page) or can furnish any stock size of our "Star Brand" Brass, Copper, Nickel Silver or Bronze, perforated in practically any pattern or design. It is not practicable, however, to perforate holes of smaller diameter than the thickness of the metal.

In ordering, exact dimension of sheet required should be specified, kind of metal and thickness in B. & S. or Stubs Ga. (be sure to state which). If blank or selvage edge is required, specify width and on which sides; specify also size and location of bolt holes in margin; submit sketch if possible.

Specify whether perforations are to be round, square, oval or oblong; give approximate distance from centers; state whether perforations are to be staggered or in line both ways; if diagonal slot, specify direction in which perforations are to run. State purpose or kind of service for which plate is to be used.

BRASS & COPPER CO.

MONEL METAL

Monel is not a *manufactured* or *synthetic* metal. It is a *natural* alloy of Nickel and Copper, smelted and refined just as it comes from the mine without in any way altering the *natural* proportions and combination of these two non-rusting basic elements. Monel Metal contains approximately 67% Nickel and 28% Copper; the remaining 5% being made up of other elements.

In color, Monel Metal can hardly be distinguished from pure Nickel. It is a ductile, tough, white metal through and through, and can be machined, forged, soldered, brazed and welded.

While Monel is sometimes referred to as a "non-corrosive" metal, that is somewhat of a misnomer. Monel Metal will not "rust" in the sense that iron and steel corrode, but neither is it impervious to all metal-eating agents. Chemical and metallurgical science have yet to discover a metal that cannot be attacked by some acid or corrosive agent.

In most instances, however, where non-ferrous metals are quickly attacked, the action of the same destructive agents on Monel Metal is negligible; oftentimes, in fact, have no effect upon it whatsoever.

METAL SPECIALTIES

SCREW MACHINE WORK

Comprises an unlimited range of sizes and styles of small parts and special articles, in fact practically anything that can be turned from straight rod stock.

On quantity work very material economies are often-times possible of attainment by employing modern Automatic Screw Machine equipment.

This class of work is a specialty with us and we can furnish Automatic Screw Machine products of all descriptions ranging in size anywhere from 1-64" to 3½" in diameter, in Brass, Bronze, Copper, Nickel Silver, Monel Metal, Aluminum and Special Alloys.

Where quantities required are too small to warrant "setting up" Automatics, we are equally well prepared to produce work by means of hand screw machines and lathes.

Parts can be supplied in any standard or special finish.

CASTINGS—ROUGH OR MACHINED

Furnished in Brass, Bronze, Nickel Silver, Monel and special metals in any size, shape and quantity.

Nothing short of the most skillful workmanship resulting from long Foundry experience and the expert supervision that is employed in the production of our castings can secure results that will pass the rigid requirements of our inspectors.

Our castings are close grained, free from flaws and sand holes and composition is uniform as only new metals are used. Extensive moulding machine equipment enables us to turn out quantity jobs very economically.

SPRINGS AND FORMED WIRE PARTS

We offer you the benefit of every modern facility in the production of this class of work. Economy and efficiency in manufacturing processes as well as accuracy and highest quality of product are the outstanding features of our bid for your business in this line.

Limited space available here does not permit illustration of all varieties of springs but whatever your requirements may be we are confident of our ability to fill them satisfactorily in every respect.

Skillful Handling—

of machinery and materials by our trained factory operatives enables us to guarantee that the quality of our products will meet your specifications and requirements in every respect.

Frequent Inspections—

during the various processes of manufacture insure against defects, inaccuracies and sub-standard results of any character.

BRASS & COPPER CO.

METAL SPECIALTIES

SHEET METAL PARTS

Cut, Drawn, Stamped, Spun and Formed articles of any style, shape or size can be furnished promptly and in many instances at costs that are surprisingly low.

Articles of this nature can be supplied completely assembled or in any intermediate stage of manufacture, such as, for example, articles and parts illustrated on this page.

To manufacturers who desire to do their own assembling and finishing, extreme care in handling work strictly according to specifications is of vital importance. This we endeavor at all times to do; a series of rigid inspections to which we subject all of our work insures complete satisfaction on this score.

A description of subsequent operations indicating how such articles are to be finished and handled in the final assembling operations oftentimes helps materially to secure satisfactory results.

METAL NOVELTIES—

MECHANICAL DEVICES

In addition to our ability to supply the various classes of parts briefly outlined above we are prepared to furnish special novelties and mechanical devices completely assembled for those who do not have the proper equipment and manufacturing facilities for doing this class of work themselves.

In addition to complete specifications and blue prints, full information as to essential operations and ultimate use of the article should accompany all inquiries and orders.

COPPERSMITH PRODUCTS—PIPE COILS

Orders and inquiries are solicited for anything in this line from the simplest type of Brass or Copper Coil, Bend, Pan or Kettle to the most intricate and extensive rectifying and evaporating apparatus or other highly specialized equipment.

Consultation—

with our corps of trained specialists is invited. They will be pleased to offer suggestions as to the adaptability of various automatic machine operations which might prove advantageous in connection with products you are now making or with work which you may have in contemplation for future production.

Samples, Blue Prints or Detailed Sketch—

with full specifications of your exact requirements should accompany all orders and inquiries in order that there may be no misunderstanding as to exactly what is wanted.

" " 7;	1 1/4" " "	20 " "	5 and 6 Ft. Single	" " "	All on one side of strip.

Special types and sizes furnished promptly from mill.

PLAIN BRASS STRIPS

3/4" Wide;	1/16", 3/32", 1/8", 3/16", 1/4", Thick;	8 to 10 Ft. Long
1 " " "	1/16", 3/32", 1/8", 3/16", 1/4", " "	8 to 10 Ft. " "
1 1/4" " "	1/16", 3/32", 1/8", 3/16", 1/4", " "	8 to 10 Ft. " "

The foregoing sizes can be furnished on short notice, punched with anchor holes.

PUNCHED BRASS COVE STRIPS

19 B. & S. Ga. Thick; Any Height up to 7" Base

Punched Brass Strip; Types 1, 3 and 7 (Style only, not accurate to size)

Punched Brass Strip; Types 2 and 4 (Style only, not accurate to size)

Punched Brass Strip; Types 5 and 6 (Style only, not accurate to size)

Careful study of the requirements of the trade has resulted in the development of the foregoing types and sizes of Brass Floor Dividing Strips, all of which are now standard with us, and, as stated, regularly carried in our warehouse stock, ready for immediate shipment.

"Star Brand" Brass Floor Dividing Strips are made from Hard Temper Brass which insures rigidity and prevents curving or warping when handled.

All Hungerford "Star Brand" Strips are put through a special straightening process. Edges are parallel and true.

The use of "Star Brand" Strip assures a substantial reduction in the amount of labor required for setting and grinding.

"Star Brand" Strip is shipped in sturdy wooden cases containing approximately 1,000 lin. feet. Extreme care is exercised in packing to insure safe transit and keep strips in perfect condition.

BRASS SPELTER SOLDER

For Brazing Copper, Brass, Steel and Cast Iron

Illustrations at the left are actual size of material and show the various kinds we carry on hand in our Warehouses ready for immediate shipment, packed in 100-lb. net bulk cases, neat 1-lb. paper boxes, and in 10- and 25-lb. tin cans with screw top.

Nos. 20 to 26, inclusive, are best adapted for Brazing Copper, Brass and Steel.

Nos. 10 and 12, "XX" Fine Grain, Gray, for Brazing Fine Brass. These grades are free flowing and are especially adapted for Gas Fixture Work and for Brazing Copper Pipe to Brass Fittings.

The requirements of Brazing Solder, especially in connection with copper work for steam purposes, necessitates a quality that can be absolutely relied upon to flow freely and produce maximum strength of seam.

"STAR BRAND" Brass Spelter Solder is used exclusively by many large coppersmiths, ship builders, and other consumers who are technical in their requirements. Where a high-grade Spelter Solder is required, do not fail to give "STAR BRAND" a trial. You will find that it will meet your requirements in every respect.

3, 4, 5 and 6 lbs. to the pair. Packed in cases of 25 pairs of a size.

† RIVETED HANDLE PATTERN

2, 3, 4, 5 and 6 lbs. to the pair. Packed in cases of 25 pairs of a size.
† Carried only in our Philadelphia stock.

BABBITT METALS

Carried in Stock Ready to Ship

"NAVALOY" HEAVY DUTY BABBITT

In 2 lb. cakes

"Navaloy" is a high grade, Tin base Babbitt. It is a composition
of only the best virgin metals and is guaranteed not to contain a
trace of lead or impurities of any description.

HUNGERFORD "EXTRA" BABBITT

In 5 lb. bars

Where a high-grade Babbitt is required that costs less (by virtue
of its formula) than our "Navaloy," we recommend our Hungerford
"Extra."

This is a strong, copper-hardened, anti-friction metal. Especially
designed for carrying heavy loads at comparatively high speeds.

HUNGERFORD "SPECIAL" BABBITT

In 5 lb. bars

Is a low-priced metal having all the requisite qualities of a Babbitt
for low-speed machinery, small, light duty engines, planing mill and
wood-working machinery and for miscellaneous light service machine
and line shafting work.

PARSON'S WHITE BRASS SA

For marine work under high speed and heavy pressure. This
metal will adhere to boxes by tinning. Elastic limit under compres-
sion 6,000 lbs. per sq. in.; Brinell hardness 36 to 46. Coefficient of
Friction .00801; Load 750 lbs. per sq. in.; Speed on journal surfaces
600 ft. per min.

1 7/8	86.81	82.61	81.98
1 15/16	89.71	85.37	84.71
2	92.60	88.12	87.44

These weights are theoretically correct but variations must be expected in practice.

To determine the weight of Nickel Silver Sheet other than 18%, multiply above weights for 18% Nickel Silver as follows: For 10% multiply by .9912. For 15% multiply by .9862. For 30% multiply by .9985.

* Phosphor Bronze is slightly lighter in weight than pure Copper, but for all practical purposes the above weights of Copper Sheets can be used as equivalent in weight to the same sizes of Phosphor Bronze Sheet.

Approximate Weight of Sheet Copper per Square Foot when thickness is given in Fractional Parts of an Inch

⅛ in. thick.....	3	lbs. to the square foot
¼ in. thick.....	6	lbs. to the square foot
½ in. thick.....	12	lbs. to the square foot
¾ in. thick.....	24	lbs. to the square foot
1 in. thick.....	46½	lbs. to the square foot

The area of a circle is equal to the square of the diameter multiplied by 0.7854. The circumference of a circle is equal to the diameter multiplied by 3.1416.

To Ascertain the Weight of Copper—Find the number of cubic inches in the piece, multiply by 0.3214, and the product will be the weight in pounds. Or, multiply the length and breadth (in feet) and that by the pounds per square foot

SEAMLESS BRASS TUBE

RULE FOR CALCULATING APPROXIMATE WEIGHT PER LINEAR FOOT OF ANY SIZE NOT LISTED ABOVE
 (Outside Diameter in inches, plus Inside Diameter in inches) multiplied by (Wall Thickness or Gauge in inches) and multiply the sum total by 5.77
 For example: To find the weight of 2 1/8" O. D., 14 Stubbs Ga. Seamless Brass Tube
 Outside Dia. 2.0625"
 Inside " 1.8965"

$$3.9590' \times .083' (14 \text{ Stubbs Ga.}) = .328597 \times 5.77 = \text{Ans. } 1.896 \text{ Lbs. per linear Foot.}$$

U.T. HUNGERFORD BRASS & COPPER CO.

These weights are theoretically correct, but variations must be expected in practice.

WEIGHT OF PHOSPHOR BRONZE RODS

Phosphor Bronze is slightly lighter in weight than pure Copper but for all practical purposes the above weights of Copper Rod can be used as equivalent to the same sizes of Phosphor Bronze Rod.

RULES RELATIVE TO THE CIRCLE

To Find Circumference—

Multiply diameter by 3.1416 or divide diameter by 0.3183

To Find Diameter—

Multiply circumference by 0.3183 or divide circumference by 3.1416

To Find Radius—

Multiply circumference by 0.15915 or divide circumference by 6.28318

To Find the Area of a Circle—

Multiply circumference by one-quarter of the diameter.

To Find the Surface of a Sphere or Globe—

Multiply the diameter by the circumference.
